

Mobilizing Health Care Professionals

What is Provider Bridge?

Provider Bridge is an online tool that makes it easier to connect health care providers with health care entities during national public health emergencies.

Launched during the COVID-19 pandemic, Provider Bridge fills a critical need to help facilitate the movement of volunteer health care providers to quickly increase access to care in areas of need.

The platform includes a directory of state and federal resources and a dedicated customer service hub to help ease the burden on health care professionals and support license portability.

Healthcare professionals can:

- register and voluntarily submit their credentials and professional background information to treat patients in-person or via telehealth in impacted areas
- obtain official, digital documents of licensure information that are recognized and accepted by licensing entities and other state agencies during states of emergency
- access a dedicated customer service hub to help navigate current state licensure requirements

Healthcare entities can:

- access a database of information for verified, volunteer clinicians willing to provide telehealth services or in-person care during emergencies
